

SATQUERY AI — EARTH OBSERVATION REPORT

Remote Sensing Inspection & Telemetry

Report ID:	a0a9558084b74e1a	Generated:	2026-09-07T17:12:33
Confidence:	Medium (0.65)	Imagery Count:	2 scene(s)
Visual Query:	Detect changes between baseline and monitoring scenes	Evidence Type:	change_overlay

Executive Summary & Findings

{ "summary": "The primary change detected between T1 and T2 is the appearance of a large, striped grey overlay in Image 2, which completely obscures a significant portion of the harbor and adjacent port infrastructure. No discernible real-world structural, infrastructural, or land-use changes are evident in the underlying scene.", "detailed_analysis": { "scene_overview":

Visual Evidence Grounding

Multi-Angle Satellite Telemetry

Scene Overview	{ "summary": "The primary change detected between T1 and T2 is the appearance of a large, striped grey overlay in Image 2, which completely obscures a significant portion of the harbor and adjacent port infrastructure. No discernible real-world structural, infrastructural, or land-use changes are evident in the underlying scene.", "detailed_analysis": { "scene_overview":
Land Cover (LULC)	General remote sensing scene
Spatial Patterns	Standard geographic layout

Spectral Indicators	Visible optical spectrum
Risk & Exposure	No critical hazards detected

Execution Trace & Telemetry Audit

Stage	Status	Detail	Latency
Compatibility Check	OK	Validated 2 image(s) for intent: change_detection	0.0ms
Routing	OK	Intent: change_detection → Selected Specialist: Change Detection	0.0ms
Analyzing	OK	Processed by Bi-Temporal VLM (Gemini 2.5 Flash)	17357.0ms
Building Evidence	OK	Rendered bi-temporal comparative panel: None	265.0ms
Confidence Scoring	OK	Raw: 0.65 → Medium (0.65)	0.0ms
