

SATQUERY AI — EARTH OBSERVATION REPORT

Remote Sensing Inspection & Telemetry

Report ID:	af603527f7294924	Generated:	2026-09-07T17:06:35
Confidence:	High (0.94)	Imagery Count:	2 scene(s)
Visual Query:	Detect changes between these two temporal scenes	Evidence Type:	change_overlay

Executive Summary & Findings

Bi-temporal analysis confirms new logistics warehouse construction in the northeast quadrant.

Multi-Angle Satellite Telemetry

Scene Overview	Urban port logistics terminal before and after expansion.
Land Cover (LULC)	Bare Soil to Paved: ~22%, New Roof Footprint: ~16%
Key Features	- High-bay warehouse - Paved container apron
Spatial Patterns	Rectilinear industrial expansion
Spectral Indicators	Albedo increase in roof zones
Risk & Exposure	Elevated stormwater runoff

Execution Trace & Telemetry Audit

Stage	Status	Detail	Latency
Routing	OK	Bi-Temporal Change Detection	12.5ms
