

SATQUERY AI — EARTH OBSERVATION REPORT

Remote Sensing Inspection & Telemetry

Report ID:	b8f61c21b14647f4	Generated:	2026-09-07T17:11:53
Confidence:	Medium (0.65)	Imagery Count:	2 scene(s)
Visual Query:	Detect changes between baseline and monitoring scenes	Evidence Type:	change_overlay

Executive Summary & Findings

{ "summary": "A significant data anomaly, specifically a large rectangular grey obscuration, has appeared in the monitoring scene (T2), covering a substantial portion of the harbor area. This artifact prevents the detection of any potential physical changes within the obscured region, while the unobscured areas show general stability.", "detailed_analysis": { "scene_overview": "Image 1 (T1) provides a clear baseline view of a bustling port city, featuring extensive urban infrastructure, a large commercial harbor with numerous vessels, and surrounding residential areas. Image 2 (T2) captures the same geographic footprint but is significantly compromised by a large, uniform grey rectangular block that completely obscures a major part of the harbor and

Visual Evidence Grounding

Multi-Angle Satellite Telemetry

Scene Overview	{ "summary": "A significant data anomaly, specifically a large rectangular grey obscuration, has appeared in the monitoring scene (T2), covering a substantial portion of the harbor area. This artifact prevents the detection of any potential physical changes within the obscured region, while the unobscured areas show general stability.", "detailed_analysis": { "scene_overview": "Image 1 (T1) provides a clear baseline view of a bustling port city, featuring extensive urban infrastructure, a large commercial harbor with numerous vessels, and surrounding residential areas. Image 2 (T2) captures the same geographic footprint but is significantly compromised by a large, uniform grey rectangular block that completely obscures a major part of the harbor and
Land Cover (LULC)	General remote sensing scene
Spatial Patterns	Standard geographic layout
Spectral Indicators	Visible optical spectrum
Risk & Exposure	No critical hazards detected

Execution Trace & Telemetry Audit

Stage	Status	Detail	Latency
Compatibility Check	OK	Validated 2 image(s) for intent: change_detection	39.0ms
Routing	OK	Intent: change_detection → Selected Specialist: Change Detection	0.0ms
Analyzing	OK	Processed by Bi-Temporal VLM (Gemini 2.5 Flash)	19015.0ms
Building Evidence	OK	Rendered bi-temporal comparative panel: None	244.0ms
Confidence Scoring	OK	Raw: 0.65 → Medium (0.65)	0.0ms
